The stimulus questions for article “Early Self-Prone in Awake, Non-intubated Patients in the Emergency Department: A single ED ‘s Experience During the Covid 19 Pandemic” are below:

1. What are some considerations around completing research during a pandemic?
2. If you were going to design an RCT to investigate whether awake prone benefits hypoxic Covid-19 patients...
 - a. What would be your inclusion and exclusion criteria?
 - b. What would be your primary outcomes vs. secondary?
 - c. What key data would you prioritize to determine your outcomes?
 - d. How might you randomize to intervention vs. control?
3. What is the value of non-traditional sources of information like FOAM/Twitter/physician forums? ...does this change in the context of the Covid-19 pandemic?
4. Will this study change your practice?
